

# Duck island birds

The Duck Island house about a core of sea and coast land birds to feed or breed. The Limicoles (ruddy turnstone, tattlers, Bar-tailed Godwits) that you can watch from september to april on the island are migratory birds breeding in North Pacific (Siberia, Alaska). The noddies, terns and puffins breed on New Caledonia islands.

Over 400 puffin couples nest on Duck Island in holes dug in the sand. Please, make sure you respect the places and access limits in order to secure their safety.

**Roseate Tern**  
*Sterna dougallii*

## Fairy Fern

## Black-naped Tern

## Buff-banded Rail

## *Wedge-tailed Shearwater* *Ardenna pacifica*

*Black Noddy*
